Highlights
Handysize and Supramax freight market indices reached their highest 3Q levels since 2011, and our average Handysize and Supramax daily TCE earnings in 3Q improved by 24% and 30% YOY respectively.

During 3Q, we purchased and took delivery of one modern secondhand Supramax vessel.

Three of four modern vessels we committed to purchase in May 2018 (50% funded by equity) are scheduled to deliver into our ownership over the next five months, taking our owned fleet to 112 ships.

Well Positioned for a Continued Recovery:

- Despite increasing trade tensions, the outlook for widely-spread global GDP growth remains favourable, which bodes well for dry bulk demand.
- In addition, new regulations will discourage new ship ordering and constrain supply due to increased off-hire and slower ship operating speeds.
- We continue to be cautiously optimistic for a continued market recovery, although with some volatility along the way.
- Our robust customer-focused business model, global office network, experienced people, larger owned fleet with substantially fixed and competitive cost, position us well to benefit from the recovering market.
Our Quarterly TCE has Improved Significantly Since Early 2016

- PB TCE earnings currently highest since winter 2013/2014

*Note that our 2019 forward cargo contract cover is back-haul heavy*

Cover as at 10 Oct 2018

3Q18 Improvement over 3Q17:
- Handysize: +24% / $1,950
- Supramax: +30% / $2,830
Freight Market Continues to Improve

- YTD 2018 freight indices have followed a similar seasonal pattern as in recent years, although at a higher level.
- Both Handysize and Supramax spot earnings reached their highest 3Q levels since 2011 after a softer summer market followed by improving market conditions since late September.
- Demand was partly driven by healthy North American grain exports in the Atlantic and solid growth in Indonesian coal and minor bulk exports in the Pacific, as well as growth in Chinese imports of coal, minor bulks and logs.
- In addition, fuel oil prices have increased contributing to slower ship operating speeds since May and, in turn, reducing dry bulk supply and therefore improved market conditions.

* Excludes 5% commission
* BSI is now based on a standard 58,000 dwt bulk carrier

Source: Baltic Exchange, data as at 10 Oct 2018
2018 Demand is Forecast to Grow 3.1% with Minor Bulks at +4.0%

Increasing demand for minor bulk commodities, including grain, coal, and iron ore, is expected to drive growth in 2018. Grain demand is forecast to increase by 1.4%, coal by 4.9%, and iron ore by 1.7%. Minor bulks are anticipated to grow by 4.0%.

- **Demand Growth Since 2010**
  - 2010: 13.4%
  - 2011: 6.3%
  - 2012: 5.9%
  - 2013: 5.3%
  - 2014: 6.4%
  - 2015: 0.8%
  - 2016: 2.4%
  - 2017: 5.0%
  - 2018: 3.1%
  - 2019: 3.0%

- Trade conflict between the US and China could impact cargo flows in the minor bulk segment, including US agricultural products, primarily soybean, as well as forestry products and cement.

- Protectionist actions to date impact only a small fraction of the trades in which Pacific Basin is engaged, and commodity trade flows tend to shift rather than cease as a result of tariffs.

</tbody>
</table>

- Combined Handysize and Supramax scheduled orderbook has reduced to 5.5%, lowest since 1990s

Source: Clarksons Research, as at 1 Oct 2018
Newbuilding Deliveries Continue to Reduce

- 2.3% net fleet growth in 1Q-3Q18 (2.7% deliveries less 0.4% scrapping)
- Very limited ordering in Handysize and Supramax (historically low 1.5% of fleet) + continued orderbook delivery shortfall ➔ should result in continued low new ship deliveries in coming years

Source: Clarksons Research, as at 1 Oct 2018
Favourable Dry Bulk Supply and Demand Outlook

Clarksons Research estimates FY18:
- 3.1% tonne-mile demand growth
- 2.7% net fleet growth
  (3.3% deliveries – 0.6% scrapping)
- Actual deliveries expected to be around 27m dwt compared to 38m dwt in 2017
- Progressively fewer new ships will deliver from shipyards in 2018 and 2019

The supply fundamentals are more favourable for the Handysize and Supramax segment with expected net fleet growth of 2.2% for 2018 and below 2% for both 2019 and 2020.

Source: Clarksons Research and Pacific Basin, as at 1 Oct 2018
The value of a benchmark five year old Handysize bulk carrier is up 7% YTD but slightly down since mid-year due to subdued buying interest for Handysize ships during the softer summer and as buyers monitored developments of the ongoing trade dispute between the US and China.

The increasing gap between newbuilding and secondhand prices (and uncertainty over future ship design requirements) continues to discourage new ship ordering.

# New Regulations

<table>
<thead>
<tr>
<th>New Regulations</th>
<th>Content</th>
<th>Impact on the Industry</th>
<th>PB actions</th>
</tr>
</thead>
</table>
| IMO Ballast Water Treatment: Installation required at first dry-docking after 8 Sep 2019 | - International Maritime Organization (IMO) requires ballast water treatment equipment (BWTS) to be fitted on all ships  
  - US Coast Guard requires all ships sailing to US to use approved BWTS | - Increased capex for existing shipowners  
  - Potentially increased scrapping | - We have arranged BTWS for all our owned vessels  
  - 9 owned vessels are already fitted with BWTS and 2 acquisitions will soon deliver pre-fitted  
  - Committed to retrofit our remaining 100 owned vessels with a system based on filtration and electrocatalysis  
  - Well positioned to complete implementation by 2023 |
| Low Sulphur Emissions Cap: 1 Jan 2020  | - IMO has set a global 0.5% sulphur limit for marine fuel oil, effective 2020 (in addition to existing 0.1% sulphur limit in Emission Control Areas)  
  - Exception: Shipowners can use higher sulphur fuel if they fit scrubbers (costing several million US$) to clean exhaust gas | - Low sulphur fuel is more expensive leading to more slow-steaming  
  - Increased capex and off-hire (if installing scrubbers)  
  - Uncertainty of ship design discourages newbuild ordering  
  - Potentially increased scrapping ➔ Leading to reduced supply | - We are well-prepared for both the low sulphur fuel and scrubber options, but continue to believe that the majority of the geared dry bulk fleet (especially smaller ships like Handysize) will comply by using low sulphur fuel |
| Reducing carbon and greenhouse gas emission by 2050 | - IMO announced to cut total carbon and greenhouse gas emissions from shipping by at least 50% by 2050 (compared to 2008), requiring average efficiency improvements of at least 40% by 2030 and 70% by 2050 | - Reducing speed of vessels to reduce emission  
  - Development of new fuels, engine technology and vessel designs  
  - Potentially increased scrapping ➔ Leading to reduced supply | - Holding back ordering of new ships and closely monitoring the development of new technology and designs |

We believe the new regulations will penalise poor performers and older ships while benefitting stronger companies with high quality ships that are better positioned to adapt and cope practically and financially with compliance.
Outlook and Strategy
PB’s Fleet Mix is Changing

Our number of owned ships is increasing providing us with greater operational control and earnings leverage.

Owned vessels are replacing LT charters as these get re-delivered, which should further improve earnings.

Our ST chartered fleet fluctuates with market requirements and achievable operating margin. The reduction since 2017 is mainly due to reduced Chinese steel export volumes because of strong domestic demand.

Our business model has been refined over many years. We are able to generate a TCE earnings premium over market rates because of our high laden percentage (minimum ballast legs), which is made possible by a combination of:

- Our fleet scale
- High-quality interchangable ships
- Experienced staff
- Global office network
- Our cargo contracts, relationships and direct interaction with end users
- Our fleet has a high proportion of owned vessels facilitating greater control and minimising trading constraints
- Our segment’s versatile ships and diverse trades

Our Outlook and Strategy

Outlook

- The minor bulk freight market has improved again since late September. Despite increasing trade tensions, the outlook for widely-spread global GDP growth remains favourable and bodes well for dry bulk demand. In addition, supply fundamentals are now more positive.

- Possible market drivers in the medium term:
  - Positive economic growth and commodity demand outlook, low deliveries, and new regulations discouraging new ship ordering and constraining supply due to increasing off-hire and slower ship operating speeds.
  - Risk of reduced Chinese coal and ore imports, trade tariffs and trade conflict escalation impacting dry bulk demand; increased new ship ordering and faster ship operating speeds.

- We are cautiously optimistic for a continued market recovery, although with some volatility along the way.

Strategy – Well Positioned for a Recovering Market

- Continue to focus on our world-leading Handysize and Supramax business.
- Maximise our fleet utilisation and TCE earnings by combining minor bulk characteristics with our large fleet of substitutable ships and global office network.
- No newbuildings in the medium term, we will watch technological and regulatory developments closely.
- Healthy cash and net gearing positions enhance our corporate profile as a preferred, strong, reliable, safe partner for customers and other stakeholders.

Appendix:
Dry Bulk Demand in 2018

Key Drivers in 3Q18

- Broad based economic recovery seen through increased steel output, also outside China
- US coal exports grew strongly
- Stronger minor bulk demand in the Atlantic driven by Brazilian and US agricultural exports; Pacific demand benefited from increased trade in bauxite, nickel ore, copper concentrates and forestry products and other minor bulks in which we specialise

Longer-Term Trends beyond 2018

- Solid world GDP – main driver for dry bulk demand growth
- Continued growth in grain demand for animal feed due to shift towards meat-based diet
- Trade disputes between US and its key trading partners appear so far to have had only limited impact on agricultural and steel trade volumes globally, but an escalating global trade war could impact global GDP and dry bulk demand
- Government policy in China and India could affect coal trades - up or down

2018 tonne-mile effect = 3.1%

- Longer average distances are forecast to supplement volume growth by an additional 0.5%, generating total demand growth of 3.1% (+4% for minor bulk)
Appendix: Handysize and Supramax Scheduled Orderbook at Historically Low Level

- Combined Handysize and Supramax scheduled orderbook has reduced to 5.5%, lowest since 1990s
